

EuroFoods S.A. — Management Summary

FY2024 Performance Review · Prepared by FP&A · Data as of December 2024

Scope: **25,200** transactions
3 countries · 20 SKUs · 4 channels
FY2023–FY2024 · Currency **EUR**

EXECUTIVE SUMMARY

EuroFoods delivered **€2.36M revenue in 2024, up +5.4%** on 2023, with gross margin steady at **38.7%** — a healthy, profitable year. However, the company finished **–4.6% (–€114.6k) below budget**, and the miss was **systematic**: every country and every category landed ~5% short, driven almost entirely by **volume** (–56.8k units) rather than price. The headline issue is not performance — it is an **over-optimistic plan**, compounded by an **underperforming Online channel** that grew slower than the stores.

! Top 3 Findings

1 · The budget miss is volume, not price — and it is everywhere

A price–volume bridge splits the –€226.5k two-year gap into **–€226.2k volume / –€0.3k price**. Actuals sit ~5% under plan in **all 3 countries and all 4 categories** (France –5.0%, Germany –5.0%, UK –5.0%). Uniformity that complete signals a **top-down plan set too high**, not a local execution failure.

2 · Online is the laggard, not the leader

Against the usual e-commerce narrative, **Online grew only +4.9%** while brick-and-mortar grew **+6.0%**. Supermarket (+5.9%) is the real growth engine. Online is now **22.6%** of revenue but is **diluting** the company growth rate.

3 · Frozen Food is the structural margin drag

Group margin is healthy, but **all 5 Frozen Food SKUs fall below their 35% target** (category ≈ 34.9%). This is a **category-wide sourcing/pricing issue**, not weak individual products — so the answer is **cost & price action, not discontinuation**. Beverages is by far the most seasonal line (July index 136 vs February 74).

COUNTRY	REVENUE	MARGIN %	VS BUDGET
France	€1.82M	38.7%	–5.0%
Germany	€1.54M	38.8%	–5.0%
UK	€1.24M	38.7%	–5.0%

→ Recommendations

Rebase the 2025 budget on actuals

+€115k credibility

Reset targets to a realistic **+5–6% volume** trajectory off 2024 actuals. This alone converts a chronic –5% "miss" into an achievable plan and restores forecast trust.

Fix or re-cost the Online channel

+€50–80k

Online's +4.9% lags the +6.0% stores. Audit pricing, fulfilment cost and assortment; closing the gap to the store rate adds ~€6k/yr directly, and a targeted **+20% Online push offsets a –10% Convenience decline for a net +€68k (+2.9%)** — the most efficient growth lever available.

Attack Frozen Food cost-to-serve

+€15–20k margin

Renegotiate frozen supply or lift price ~1–2% to pull the category back above its 35% target. A 1pp margin recovery on €1.42M frozen revenue ≈ **€14k**, with no volume risk if paired with seasonality-aware promo.

Risks & Assumptions

- ▲ **Flat-price assumption**: the scenario holds 2024 prices; input-cost inflation could erode the frozen margin gains.
- ▲ **FX exposure**: UK is **27%** of revenue; EUR/GBP swung 0.831–0.883 (~6%) — translation risk not in these EUR figures.
- ▲ **Linear forecast**: the projection assumes 2024 seasonality repeats; a demand shock or lost key account (top customers are concentrated) would break it.
